MOST RECENT

Software Engineer Intern, UWM

EDUCATION

B.S. Computer Science · GPA 3.7

AVAILABLE

2027 new grad · full-time

EXPERIENCE

UWM — Software Engineer Intern

May – Aug 2026 · Pontiac, MI

- TOOLING** Built an internal **loan information tool** inside BOLT (.NET + React), the underwriting platform used daily by the largest mortgage lender in the U.S., consolidating loan data teams previously pieced together across several screens.
- CLEANUP** Retired **20 stale feature flags** and removed the dead code paths behind them, cutting branching logic out of production flows and leaving the surrounding components measurably simpler to read and test.

UWM — Full Stack Intern

May – Aug 2025 · Pontiac, MI

- DELIVERY** Shipped **10+ backend and frontend stories** into BOLT (.NET + React), the underwriting platform used daily by the largest mortgage lender in the world.
- SECURITY** Hardened a production codebase by remediating **100+ code smells** and open vulnerabilities surfaced by SonarQube and Snyk.
- QUALITY** Cut regression risk before release by expanding **unit (NUnit, xUnit) and integration test** coverage, containerized in Docker so every environment validated identically.

Johnson Electric — IT Intern

June – Aug 2024 · Livonia, MI

- DELIVERY** Put **3 PowerApps applications** into daily use — an onboarding system and two time-tracking apps for project managers in Hong Kong and the local engineering group.
- PROCESS** Replaced a manual multi-department handoff with an **end-to-end onboarding workflow**, smoothing every new-hire transition.
- AUTOMATION** Took manual PDF sorting off the finance team with a **Power Automate Desktop flow** that splits and renames files by their content.

PROJECTS

- Stock Prediction Algorithm.** Stacked LSTM + XGBoost ensemble on a Python ETL pipeline, testing whether real-time market data sharpens next-day movement forecasts.
- JobHunter.** Job-application assistant (Python, FastAPI, Playwright, SQLAlchemy) that discovers postings across four job boards, tailors a résumé per posting with an LLM, and queues every draft for manual approval before anything submits.
- Smart File Sorter.** Cross-platform desktop app (Tauri 2, Rust + React/TypeScript) that streams a disk scan into a cached index, finds duplicates by BLAKE3 hash, and applies organize rules through a journal so every batch is undoable.
- Pokémon Database.** Full-stack Pokédex on PostgreSQL with a Python ETL loader and a Tkinter GUI, turning a scattered dataset into something queryable.

SKILLS

- CORE** C# · .NET · React · JavaScript · SQL
- TESTING** NUnit / xUnit · pytest · SonarQube · Snyk
- TOOLING** Docker · Jenkins · Git / GitHub · PostgreSQL
- ALSO** Python · Java · Rust · TypeScript

EDUCATION

- B.S. Computer Science — Oakland University**
Auburn Hills, MI · GPA 3.7 · Expected May 2027
